

PAINTING SCHEMES CATALOGUE 2012

Katalog vnějších nátěrů letounů Eurostar, SportStar a Harmony

V katalogu jsou uplatněny následující principy:

- ❖ viditelné barvy ve skicách jsou pouze informativní, závazné barvy jsou definovány ve stupnici RAL
- ❖ barevné obdélníky slouží pro identifikaci barevných ploch na obrázku a jsou pro názornost spojeny s první definicí (STANDARD)
- ❖ pokud je použita grafika z lepených fólií v dané barvě („fólie ORACAL“) nemusí být odstín fólie zcela shodný s odstínem barvy RAL – zejména u barev „metallic“
- ❖ pokud je před označením barvy v RAL použito symbolu R-55/... označuje to barvu provedenou pomocí dvouvrstvého systému pro metalické barvy (barva + čirý lak); v názvu barvy je označení „metallic“
- ❖ pokud je v barevném obdélníku použit u čísla symbol „f“, je v této barvě použita pouze řezaná grafika ORACAL z lepených fólií; následná definice v RAL je pouze informativní
- ❖ uvedené hmotnosti jsou informativní a závisí na použitých odstínech; přibližný porovnávací graf hmotnosti odstínů viz dále (bílá znázorňuje 100%); uvedená hmotnost je rozdílová vůči standardnímu nátěru

- ❖ ceny jsou uvedeny symbolem např. „P#5 E9-15“, kde E9-15 je část čísla výkresu pro identifikaci; ceny korespondují s ceníkem
- ❖ v provedení STANDARD je použito pouze nemetalických barev
- ❖ v provedení ½ METALLIC jsou použity metalické odstíny na nemetalické barvě
- ❖ v provedení 1/1 METALLIC jsou všechny barvy metalické

Painting schemes catalogue of Eurostar, SportStar and Harmony aircraft

The catalogue has been prepared on the following basic principles:

- ❖ used colors are just for information and binding proposal shall be based on RAL color index
- ❖ color boxes are used for identification of color areas on aircraft design linked to STANDARD code
- ❖ if foil is used then foil colors (ORACAL) may not exactly be the same shade with RAL index especially for metallic colors
- ❖ if RAL color index contains prefix R-55/... then two-coated painting system for metallic colors is used (color + clear varnish); name of color include “metallic” indication
- ❖ while scheme code box contains “f” then plastic foil ORACAL is used; following RAL color index is informative only
- ❖ referred weights are informative and depend on used color shades; estimative comparative diagram see below (white represents 100%); weight shown is differential compared with standard design

- ❖ prices are stated by symbol e.g. „P#5 E9-15“, where E9-15 represents part of drawing number for identification only; prices refer to valid price lists
- ❖ nonmetallic colors are used for STANDARD design
- ❖ ½ METALLIC configuration means metallic colors on nonmetallic top coat
- ❖ 1/1 METALLIC configuration means that all used colors are metallic

COLOR SELECTION RECOMMENDATION:

If the plane is exposed direct sunshine during warm climate then “can effect” or wave can arise if dark colors are used. For these conditions we are strongly suggesting to use light colors only.

ORDER CONDITIONS:

- ❖ price of specific scheme corresponds to valid price list
- ❖ changes of RAL color index is free of charge
- ❖ any modification of presented designs are subject of extra cost and can be agreed separately
- ❖ number of scheme code and color shades proper sequence – e.g. 001, RAL 9016, RAL 5005, RAL 3020
